PG&E Former St. Helena Manufactured Gas Plant Site Mitchell Drive and Oak Avenue, St. Helena, California

COMMUNITY SURVEY October 18, 2005

The Department of Toxic Substances Control (DTSC) has prepared this questionnaire to gather information as part of our public outreach program. DTSC and PG&E entered into a voluntary cleanup agreement (VCA) to perform site cleanup at PG&E's former manufactured gas plant site located at the intersection of Mitchell Drive and Oak Avenue in St. Helena, California. Site environmental investigations have been completed, and samples of soil and groundwater indicate that select areas of soil and groundwater contain MGP residues - primarily polycyclic aromatic hydrocarbons (PAHs) and petroleum hydrocarbons. This September, PG&E will be installing a soil vapor and groundwater extraction system and will be conducting a pilot study for several months to test the effectiveness of this system in addressing soil contamination. DTSC will be mailing a fact sheet this winter that presents the long-term cleanup remedies PG&E proposes to cleanup the site to levels that support future site redevelopment. Please return this survey to Nancy Cook, DTSC Public Participation Specialist, by November 9, 2005.
